

AMENDMENT TO THE SPECIFICATION

Please replace the penultimate paragraph on page 5 of the Substitute Specification with the following amended paragraph.

In FIG. 1, the The electronic component groups 1 each has at least one central processing unit (CPU) 1.1 of high computing output as the main heat producer in a housing containing the electronic components group 1.

Please replace the last paragraph on page 8 of the Substitute Specification with the following amended paragraph.

The vertical section of the central liquid line system 5 arranged in the rack or switchgear cabinet is preferably embodied as a line unit with an inlet conduit and a return conduit, and can be separately arranged in the interior of the rack 2 or the switchgear cabinet, for example on a vertical frame leg, on mounting rails or on the inside of a lining element. An embodiment is also particularly advantageous, wherein, as shown in FIG. 2, a vertical frame leg 12 has a U-shaped receptacle 14, open over its length toward the interior of the rack 2 or switchgear cabinet 16, into which the line unit can be inserted later and fixed in place, for example snapped in place.

Serial No.: 10/525,551

Connecting points with coupling elements for connecting the branch lines leading to the electronic component groups 2 are provided at regular spacings over the length of the line unit 5.4.
